## PROJECTS

---

### **Leave management System**

The Leave Management system is the Window's form based Application developed by the tools which includes Vb.net, Mysql. It is used to track the employees leave count and manage the entire leave report of the individual or the whole organisation's employees.

### **Blood Bank Management**

The Blood Bank Management project, created with HTML, CSS, JavaScript, MySQL, and Bootstrap, optimizes blood donation processes. It provides a user-friendly interface for donors, recipients, and administrators to efficiently manage blood inventory, request blood, and track donations, ensuring a streamlined and life-saving blood donation system.
